A Word About Risk

There is an inverse relationship between bond prices and interest rates; as interest rates rise, bond prices (and therefore the value of bond funds) fall. Likewise, as interest rates fall, bond prices and the value of bond funds rise. Investments in higher-yielding, lower-rated securities involve additional risks, including a higher risk of default and loss of principal. Additionally, funds whose investments are concentrated in foreign countries may be subject to fluctuating currency values, different accounting standards, and economic and political instability.
